

Building sites are very dangerous places. Can you help me find the hazards in the picture above and use the stickers to improve safety on the site? If you get stuck, try reading my top safety tips for help.

- ⚠ Pits and manholes should be covered to prevent people falling into them.
- ⚠ Fences must be put around building sites and locked. Make sure you keep out.
- ⚠ To prevent them being knocked over easily, stacks of bricks and pipes or other building materials shouldn't be stored in piles that are too high. Don't climb on them.
- ⚠ Large building materials such as pipes should be left in a way that prevents them rolling or being moved easily and hurting someone. Don't go near them.

- ⚠ Hard hats and reflective jackets should be worn on building sites to prevent injury and make workers clearly visible.
- ⚠ Vehicles should make a warning sound when reversing to alert people who have not been spotted by the driver.
- ⚠ Warning signs should be visible to alert people to the dangers on and around building sites. Make sure you keep out.
- ⚠ Temporary roadworks need to have barriers to alert people to any possible dangers. Keep away from them.
